PROFESSIONAL SUMMARY

Dynamic, results-oriented DevOps Engineer and former Technical Analyst with hands-on experience designing, automating, and securing cloud infrastructure on AWS. Proficient in end-to-end CI/CD pipeline development, Docker containerization, Kubernetes orchestration, Infrastructure as Code (IaC) with Terraform, and DevSecOps workflows. Strong engineering background derived from Full Stack Java development and technical system analysis, enabling high-performance troubleshooting, microservices deployment, system availability across enterprise environments.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EC2, EKS, S3, VPC, IAM, ECR, CloudWatch)
- **CI/CD & GitOps:** Jenkins, GitHub Actions, Git, GitHub, ArgoCD
- **Containers & Orchestration:** Docker, Docker Compose, Kubernetes, Helm, Minikube
- **Infrastructure as Code (IaC):** Terraform, Terraform Modules, Terraform Workspaces
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack, Loki, Promtail, CloudWatch
- **DevSecOps & Security:** SonarQube, Trivy, Checkov, Kubesec, Gitleaks, RBAC, Network Policies
- **Scripting & Core Skills:** Python, Bash/Shell Scripting, SQL (MySQL), Linux (Ubuntu, Amazon Linux), REST APIs, Postman, System Troubleshooting, Log Analysis

PROFESSIONAL EXPERIENCE

DevOps Engineer

BlackRoth | April 2026 – Present

- Architected and automated zero-downtime CI/CD deployment pipelines using Jenkins and Git, reducing release cycle duration by 45% across multiple cloud environments.
- Provisioned and managed scalable, multi-tier AWS cloud infrastructure (VPC, EKS, EC2, S3, IAM) utilizing Terraform modules and workspaces, achieving 100% infrastructure reproducibility.
- Orchestrated containerized microservices deployments using Docker and Kubernetes (EKS), optimizing resource utilization and maintaining 99.9% uptime for production workloads.
- Integrated automated DevSecOps scanning tools (SonarQube, Trivy, Checkov, Gitleaks) into the CI/CD pipeline, identifying and remediating 90%+ of application and infrastructure vulnerabilities prior to deployment.
- Built centralized observability dashboards and alerting rules with Prometheus, Grafana, and CloudWatch, improving Mean Time to Detect (MTTD) and Mean Time to Resolve (MTTR) by 35%.

Technical Analyst

Big Dany | January 2024 – January 2026

- Conducted deep log analysis and system troubleshooting using Linux CLI tools, MySQL, and Postman, resolving critical production issues 30% faster.
- Partnered with software engineering and system administration teams to streamline release cycles and support automated build processes using Git, GitHub, and Jenkins.

- Executed Root Cause Analysis (RCA) on system failures and API latency bottlenecks, presenting actionable recommendations to cross-functional stakeholders.
- Authored comprehensive standard operating procedures (SOPs), system architecture diagrams, and API integration workflows to standardize team operational practices.

KEY DEVOPS PROJECTS

GitOps & Production Kubernetes Deployment with Argo CD

- Built an enterprise-grade GitOps deployment workflow using Argo CD with Git as the single source of truth, establishing automated drift detection and continuous synchronization.
- Orchestrated a production multi-component application architecture featuring Django Backend, PostgreSQL StatefulSet, Redis cache, Celery workers, Celery Beat, and Nginx.

HRMS Production & Helm Deployment (AWS, Kubernetes, Terraform, Helm)

- Designed and packaged a multi-tier HRMS application into reusable Helm Charts with environment-specific configurations and dependency management.
- Implemented automated database backup CronJobs, persistent volumes, Redis caching, and zero-downtime rolling update strategies.

Enterprise Kubernetes Security & CI/CD Pipeline (Jenkins, Docker, AWS)

- Enforced Kubernetes security controls utilizing Service Accounts, Role-Based Access Control (RBAC), Network Policies, Security Contexts, and pod resource limits.
- Developed automated Jenkins pipelines to execute static code analysis, image vulnerability scanning, containerization, and automated deployment to AWS EC2.

CERTIFICATIONS & TRAINING

- **DevOps Professional Training** (Mar 2026 – Jul 2026)
  - Intensive training on AWS, Kubernetes, Terraform, ArgoCD, Prometheus, Grafana, DevSecOps, and SRE incident response.
- **Java Full Stack Certification & Training** (Jul 2023 – Jan 2024)
  - Core Java, Spring Boot, RESTful APIs, MySQL, and full-stack web application development.

EDUCATION

- **Bachelor of Technology (B.Tech) in Computer Science & Engineering** (2019 – 2023)
  - SIR C R REDDY COLLEGE OF ENGINEERING | CGPA: 7.2 / 10.0
